

Some Characteristics of Urban Slums

2008-09

NSS 65th Round
(July 2008 - June 2009)

National Sample Survey Office
National Statistical Organisation

Ministry of Statistics and Programme Implementation
Government of India

May 2010

Preface

The National Sample Survey Office (NSSO) conducted an all-India survey of rural and urban areas of the country in the 65th round of NSS during July 2008 - June 2009. The survey comprised enquiries on (i) domestic tourism (ii) housing condition (iii) condition of urban slums. The survey on slums was the fourth all-India slum survey of NSSO and was conducted in a randomly selected sample of urban blocks spread over the entire geographical area of the country. This report presents the results of the survey on urban slums.

Since the 58th round NSS survey (2002), the survey of slums is being restricted to urban areas. The aim of the survey is to collect information on the present condition of the slums and on recent changes, if any, in the condition of facilities available therein. Both 'notified slums' – areas notified as slums by the municipalities, corporations, or other civic bodies – and non-notified slums are surveyed.

The present report contains information relating to 2008-09 on ownership, area type, structure, living facilities like electricity, drinking water, latrine, sewerage, drainage, garbage disposal, and distance of slums from the nearest primary school and government hospital/health centre. It also provides information on the change in the condition of the slums during the five years preceding the date of survey. As in the last slum survey of NSSO, State-level estimates are presented for those States where the number of sample slums surveyed was at least 10. The all-India estimates are based on the slums surveyed in all States/UTs.

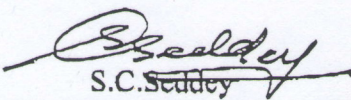

Chapter One of the report is introductory. Major definitions and concepts related to the survey are given in Chapter Two. The survey findings are discussed in Chapter Three. Detailed statistical tables are presented in Appendix A. The sampling design and estimation procedure is explained in Appendix B, and a facsimile of the schedule of enquiry canvassed in the field is provided as Appendix C.

The Survey Design and Research Division (SDRD) of the NSSO undertook the development of the survey methodology and survey instruments, and the drafting of the report. The field work was carried out by the Field Operations Division (FOD) of NSSO and the data processing and tabulation work by the Data Processing Division (DPD) of NSSO. The Coordination and Publication Division (CPD) coordinated various activities pertaining to the survey.

I would like to convey my sincere thanks to all the members of the Steering Committee of National Sample Surveys, and to the Working Group for NSS 65th round, for their valuable guidance at various stages of survey activities from designing of the questionnaire to the preparation of this report. I also express my thanks to various officers of different divisions of the NSSO involved in the preparation of this report.

I hope the report will be found useful by policy makers, academicians and researchers. Suggestions for improvement of the report will be highly appreciated.

विशेषताएं

- जुलाई 2008 से जून 2009 में किया गया इस सर्वेक्षण में नगरपालिकाओं, निगमों, स्थानीय निकायों या विकास प्राधकृत द्वारा जो नगरीय क्षेत्र 'बस्ती' अधिसूचित किए गए थे उन्हें "अधिसूचित बस्ती" माना गया। दूसरी तरफ, "गैर-अधिसूचित बस्ती" एक ऐसा सघन नगरीय क्षेत्र था जिसमें अस्थायी प्रकृति के कमजोर प्रकार के निर्मित सामान्य तौर पर एक साथ घिरे हुए घर बने थे जिनमें अपर्याप्त साफ सफाई एवं पीने के पानी की सुविधाएं अस्वास्थ्यकर परिस्थितियों में मिली। ऐसी सारी बस्तियों को, अधिसूचित या गैर अधिसूचित, यदि उनमें कम से कम 20 परिवार भी उस चयित नगरीय ब्लॉक में रहते थे तो उस सर्वेक्षण के उद्देश्य के लिए बस्ती माना गया था। 65वां दौर में 4764 आवंटित ब्लॉकों में, 4738 ब्लॉक सर्वेक्षित की गयीं : एवं उनमें से 365 अधिसूचित एवं 365 गैर-अधिसूचित बस्तियों का सर्वेक्षण किया गया।
- नगरीय भारत में 2008-09 में करीब 49 हजार बस्तियों के अस्तित्व का अनुमान किया गया, जिनमें से 24% नालों एवं मोरी के करीब स्थित थीं एवं 12% रेलवे स्टेशनों के करीब।
- लगभग 57% बस्तियों का निर्माण उस सार्वजनिक भूमि पर किया गया था, जिनका ज्यादातर मालिकाना स्थानीय निकायों, राज्य सरकार, आदि का था।
- अधिसूचित बस्तियों के 64% में, बहुमत निवास पक्के थे, एवं तदनु रूप गैर-अधिसूचित वालों के प्रतिशत 50% था।
- 95% बस्तियों के लिए, पीने के पानी का मुख्य स्रोत या तो नल या फिर नलकूप था।
- केवल 1% अधिसूचित और 7% गैर-अधिसूचित बस्तियों में बिजली नहीं थी।
- अधिसूचित बस्तियों के 78% का एवं गैर-अधिसूचित बस्तियों के 57% का बस्ती में पक्का रास्ता बना हुआ था।
- लगभग 73% अधिसूचित एवं 58% गैर-अधिसूचित बस्तियों का सड़क के साथ मोटर द्वारा पहुंचने का रास्ता बना हुआ था।
- मॉनसून में पानी जम जाने की समस्या से 48% बस्तियों पर असर पड़ा - 32% जहां बस्ती के अंदर एवं पहुंचने का रास्ता दोनों में पानी जमा, 7% जहां बस्ती में पानी जमा लेकिन पहुंचने वाले रास्ते पर नहीं एवं 9% जहां केवल पहुंचने के रास्ते पर जल जमाव हुआ।
- बस्तियों में 2002 से 2008-09 के दौरान शौचालय सुविधा में काफी सुधार आए। सैप्टिक टैंक से संयोजित शौचालय (या उससे मिलती जुलती सुविधा) 68% अधिसूचित एवं 47% गैर-अधिसूचित बस्तियों में (2002 में 66% एवं 35%) उपलब्ध थीं। दूसरी तरफ, 10% अधिसूचित एवं 20% गैर-अधिसूचित बस्तियों में (2002 से 17% एवं 51%) कोई शौचालय सुविधा उपलब्ध नहीं थी।
- लगभग 10% अधिसूचित एवं 23% गैर-अधिसूचित बस्तियों का मैले पानी की निकास नाली की व्यवस्था नहीं थी। 2002 में तदनु रूप यह अनुपात अधिसूचित के लिए 15% एवं गैर-अधिसूचित बस्तियों के लिए 44% था। पक्के माल की बनी हुई या निची भूमि की जलनिकास नाली करीब

39% अधिसूचित बस्तियों में मौजूद थी (2002 में 25%) एवं गैर-अधिसूचित बस्तियों में 24% थी (2002 में 13%) ।

- नीचे तल की भूमि की पर मल-निकास की व्यवस्था 33% अधिसूचित (2002 में 30%) एवं 19% गैर-अधिसूचित बस्तियों में मौजूद थी (2002 में 15%) ।
- सरकारी संस्थाएं 75% अधिसूचित एवं 55% गैर-अधिसूचित बस्तियों से कूड़ा इकट्ठा करती थीं । इनमें कम से कम 7 दिनों में एक बार कूड़ा 93% अधिसूचित बस्तियों से एवं 92% गैर-अधिसूचित बस्तियों से इकट्ठा किया जाता था । लगभग 10% अधिसूचित एवं 23% गैर-अधिसूचित बस्तियों में कूड़े-फेकने के लिए कोई नियमित व्यवस्था नहीं थी ।

यह नोट किया जाए कि पिछले पांच वर्षों में बस्तियों में जो परिवर्तन हुए, यह जानकार व्यक्तियों (जिनसे यह सूचना एकत्रित की गई) की रिपोर्ट पर आधारित है ।

- पिछले पांच वर्षों में, सड़कों की (दोनों बस्तियों के अंदर एवं जिस रस्ते द्वारा बस्ती तक पहुंचा जाता है) एवं पानी के मामले में सुविधाएं 50% अधिसूचित बस्तियों में बेहतर हुई थीं । पिछले पांच वर्षों के दौरान बहुत कम अधिसूचित बस्तियों में इन वर्तमान सुविधाओं की अवस्था में कमी दिखाई दी । (करीब 6% या उससे भी कम) ।
- 20% गैर-अधिसूचित बस्तियों या उससे अधिक में, मल-निकास प्रणाली एवं चिकित्सा सुविधाओं को छोड़कर पिछले पांच वर्ष में सुविधायें बेहतर हुई थी । गैर-अधिसूचित बस्ती में इनमें से किसी भी सुविधाओं की कमी, कम ही बस्तियों में दिखाई पड़ी (9% या उससे भी कम) ।
- ज्यादातर सुविधाएं जैसे, स्ट्रीट लाइट, शौचालय, जल निकास प्रणाली की व्यवस्था, एवं चिकित्सा की सुविधा के बारे में 10% से अधिक अधिसूचित बस्तियों ने यह रिपोर्ट किया कि ऐसी सुविधा न पांच वर्ष पहले मौजूद थी, न सर्वेक्षण के समय । स्ट्रीट लाइट, शौचालय, जल-निकास तथा मल-निकास प्रणाली एवं कूड़ा निपटान की व्यवस्था, प्रत्येक के बारे में 20% गैर-अधिसूचित बस्तियों ने यह रिपोर्ट किया कि ऐसी सुविधा न पांच वर्ष पहले मौजूद थी, न सर्वेक्षण के समय ।
- सारी सुविधा के विषय में, पिछले पांच वर्षों में, जहां-जहां सुविधा की परिस्थिति बेहतर हुई, ऐसी 80%-90% बस्तियों में सरकार बेहतारी की मुख्य स्रोत थी । प्राइमरी स्तर पर शैक्षिक सुविधा जहां बेहतर हुई, ऐसी अधिसूचित बस्तियों में 13% में बेहतारी की स्रोत एन.जी.ओ. थे । गैर-अधिसूचित बस्तियों में भी शौचालय एवं मल-निकास प्रणाली को बेहतर बनाने में एन.जी.ओ. ने महत्वपूर्ण भूमिका निभाई थी ।

Highlights

- For this survey, conducted during July 2008 to June 2009, urban areas notified as slums by respective municipalities, corporations, local bodies or development authorities were treated as “notified slums”. A “non-notified slum” was a compact urban area with a collection of poorly built tenements, mostly of temporary nature, crowded together usually with inadequate sanitary and drinking water facilities in unhygienic conditions. All such slums, notified or non-notified, were considered as ‘slum’ for the purpose of the survey, if at least 20 households lived in such a slum within the selected urban block. In the 4738 urban blocks surveyed out of the allotted random sample of 4764 urban blocks during the 65th round, there existed 365 notified and 365 non-notified slums.
- About 49 thousand slums were estimated to be existence in urban India in 2008-09, 24% of them were located along *nallahs* and drains and 12% along railway lines.
- About 57% of slums were built on public land, owned mostly by local bodies, state government, etc.
- In 64% of notified slums, a majority of the dwellings were pucca, the corresponding percentage for the non-notified ones being 50%.
- For 95% slums, the major source of drinking water was either tap or tubewell.
- Only 1% notified and 7% non-notified slums did not have electricity connection.
- About 78% of notified slums and 57% of the non-notified slums had a pucca road inside the slum.
- About 73% notified and 58% non-notified slums had a motorable approach road.
- About 48% of the slums were usually affected by waterlogging during monsoon – 32% with inside of slum waterlogged as well as approach road to the slum, 7% where the slum was waterlogged but not the approach road, and 9% where only the approach road was waterlogged in the monsoon.
- The sanitary conditions in the slums in terms of latrine facility during 2008-09 showed considerable improvement since 2002. Latrines with septic tanks (or similar facility) were available in 68% notified and 47% non-notified slums (up

from 66% and 35% respectively in 2002). At the other extreme, 10% notified and 20% non-notified slums (down from 17% and 51% in 2002) did not have any latrine facility at all.

- About 10% notified and 23% non-notified slums did not have any drainage facility. The corresponding proportions in 2002 had been 15% for notified and 44% for non-notified slums. Underground drainage systems or drainage systems constructed of pucca materials existed in about 39% notified slums (25% in 2002) and 24% non-notified slums (13% in 2002).
- Underground sewerage existed in about 33% notified slums (30% in 2002) and 19% non-notified slums (15% in 2002).
- Government agencies were collecting garbage from 75% notified and 55% non-notified slums. Among these slums, garbage was collected at least once in 7 days in 93% notified and 92% non-notified slums. About 10% notified and 23% non-notified slums did not have any regular mechanism for garbage disposal.

Note that the changes reported during the last five years in the slums are as reported by the knowledgeable person (from whom the information is collected) depending on his/her perceptions.

- Over the last five years, facilities had improved in about 50% of notified slums in terms of roads (both within-slum road and approach road) and water supply. The incidence of deterioration of any of the existing facilities in notified slums during the last five years was quite low (about 6% or below).
- In case of most slum facilities – sewerage and medical facilities being exceptions – the facility was reported to have improved during the last five years in more than 20% of non-notified slums. Deterioration of any of the existing facilities in non-notified slums, like notified slums, was rare (about 9% or below).
- Facilities such as street light, latrine, drainage, sewerage and medical facilities were each reported by more than 10% of notified slums to be non-existent both at the time of survey and five years earlier. In case of non-notified slums, facilities like street light, latrine, drainage, sewerage and garbage disposal were each reported by more than 20% of the slums to be non-existent, both during the survey and five years earlier.

- Where improvement had been brought about during the last 5 years, it was due to the Government's efforts in about 80-90% of slums, both notified as well as non-notified and for all the facilities. Improvement in educational facilities at primary level was attributed to NGOs in 13% of the notified slums where such improvement was reported. NGOs were also found to have played a role in the improvement of latrine and sewerage system in non-notified slums.

Chapter One

Introduction

1.1 The first nationwide survey on the 'economic condition of slum dwellers in urban cities' was conducted by the National Sample Survey Organisation (NSSO) in its 31st round enquiry (July 1976 - June 1977). The survey was restricted to (i) all the Class I towns having 1971 census population one lakh or more and (ii) two Class II towns, viz. Shillong and Pondicherry. Only the cities proper and not the urban agglomerations were considered for the survey coverage. For identifying 'undeclared slums', a slum was defined as an areal unit having twenty five or more katcha structures mostly of temporary nature, or fifty or more households residing mostly in katcha structures, huddled together, or inhabited by persons with practically no private latrine and inadequate public latrine and water facilities. The survey results were published in NSS Report No. 290: Condition of Slum Areas in Cities.

1.2 The second nationwide survey on particulars of slums was conducted by the NSSO in its 49th round enquiry (January - June 1993), which covered rural as well as urban areas. Two kinds of slums - 'declared' and 'undeclared' - were covered. Certain areas declared as 'slums' by the appropriate municipality, corporation, local body or development authorities were the 'declared slums'. Outside the declared slums, any compact area with a collection of poorly built tenements, mostly of temporary nature, crowded together - usually with inadequate sanitary and drinking water facilities - in unhygienic conditions was considered an 'undeclared slum', if at least 20 households lived in that area. The survey results, published in September 1997, are available in NSS Report No. 417: Slums in India.

1.3 After a gap of nearly ten years, the third survey in the series was conducted in the 58th round enquiry (July-December 2002). The concept of slum being basically urban, the Governing Council of the NSSO decided, on the recommendation of the Working Group on NSS 58th round, to cover only urban slums in the survey. It is

worth mentioning that the results of both the 49th and the 58th round survey reflect only the availability and not the adequacy of the facilities available in the slums. The survey results, published in December 2003, are available in NSS Report No. 486: Condition of Urban Slums, 2002: Salient Features.

1.4 The present survey – carried out in the 65th round of NSS – was thus the fourth nationwide NSS survey of slums. It relates to the period July 2008 to June 2009. Like the 49th and 58th round surveys, this survey, too, dealt with the availability and not the adequacy of facilities available in the slums. The aim was to collect information on the present condition of the slums and on the change in the condition of some facilities available therein. Like the 58th round survey, this survey was confined to the urban sector. Only slums found in the randomly selected urban blocks were surveyed.

1.5 **Objective of the 65th Round Survey of Slums:** The main aim of the survey on condition of slums was to portray the condition of the urban slums, both notified and non-notified, with respect to infrastructural facilities like the area where the slum was located, road within and approaching the slum, electricity, drinking water, sewerage, drainage, garbage disposal, etc. It was also attempted to assess the proportion of slums where certain specific facilities had improved/deteriorated over the last five years. All these aspects were proposed to be studied separately for the different State/UTs as well as at the all-India level.

1.6 **Geographical Coverage:** The survey covered the whole of the Indian Union.

1.7 **Sample Design:** A stratified sampling design was adopted for selection of the sample first-stage units (FSUs). The FSUs for the survey on condition of slums were Urban Frame Survey (UFS) blocks in urban areas. Information was collected on each slum, notified or non-notified, found in the entire area of the selected first stage units. In some cases, the area of a slum was very large and extended beyond the selected FSU. In such cases, information was collected only for the part of the slum falling within the sample FSU. For a notified slum, too, only the part of the slum falling within the sample FSU was considered as one slum and surveyed as such. It

may be noted that if a slum cut across more than one FSU, all the slum particulars recorded would relate to the part of the slum which fell in the selected FSU. A detailed discussion on the sample design and estimation procedure followed in the survey is given in Appendix B of this report.

1.8 Sub-rounds: The entire survey period (1st July 2008 - 30th June 2009) was divided into four sub-rounds of three months' duration each (Sub-round 1: July-September 2008, Sub-round 2: October-December 2008, Sub-round 3: January-March 2009, Sub-round 4: April-June 2009) and an equal number of sample blocks were allocated to each sub-round. Each FSU was surveyed during the sub-round period to which it was allocated. Within a particular sub-round, the field-work was spread out uniformly over the different months to the extent possible.

1.9 Sample Size: While the State Governments participated in the survey by surveying a separate sample of urban blocks, this report is based on the Central sample, that is, the blocks surveyed by NSSO officials. A total of 4764 FSUs (i.e., UFS blocks) were selected for the Central sample in this survey, of which 4738 could be surveyed (a response rate of 99.5 percent). At the all-India level, a total of 730 slums were covered in these surveyed urban blocks. The number of sample blocks allotted for survey and actually surveyed, along with the numbers of notified and non-notified slums surveyed, are given in Statement 1, for different States/UTs. However, presentation of the results at the State/UT level has been in respect of those States/UTs where number of sample slums was ten or more, although the all-India level estimates are based on all the surveyed slums.

1.10 Mode of Data Collection: Unlike household surveys where data are collected from a member of each household selected for the survey, data were collected in this survey for the entire slum from knowledgeable persons as judged by survey officials. Statement 2 shows the distribution of the slums surveyed in each State/UT by type of informant. Most of the data was qualitative, and was recorded in code.

1.11 Presentation of Results: The relevant concepts and definitions used in this survey are presented in Chapter Two. The summary of findings based on the survey

data is discussed in Chapter Three.¹ The detailed statistical tables for the States/UTs where the number of sample slums was ten or more are presented in Appendix A. Thus, the information about the slums in the following ten states is presented separately.

Andhra Pradesh, Delhi, Gujarat, Karnataka, Madhya Pradesh, Maharashtra, Orissa, Tamil Nadu, Uttar Pradesh and West Bengal.

Appendix B discusses the sample design and estimation procedure for the survey. A copy of the schedule is given in Appendix C.

¹ The domain of slums in itself is heterogeneous on account of factors such as their demographic composition, characteristics of their working population etc. Such heterogeneity may also exist within the slums. The present survey on slums being integrated to multi-subject survey coverage of 65th round had not been designed to capture such heterogeneities of slums.

Statement 1: Number of sample blocks allotted and surveyed, number of sample slums surveyed for each State/UT

State/UT	number of sample blocks		number of sample slums		
	allotted	surveyed	notified	non-notified	all
(1)	(2)	(3)	(4)	(5)	(6)
Andhra Pradesh	272	272	53	20	73

Statement 2: Percentage distribution of sample slums by type of informant; selected* States and all-India

State	notified slum				non-notified slum			
	type of informant			no. of sample slums	type of informant			no. of sample slums
	knowledgeable person from the slum		others		knowledgeable person from the slum		others	
	male	female			male	female		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Andhra Pradesh	62	21	17	53	80	15	5	20
Delhi	100	0	0	18	94	3	3	35
Gujarat	94	6	0	18	95	5	0	39
Karnataka	92	8	0	24	95	5	0	21
Madhya Pradesh	91	0	9	11	90	5	5	20
Maharashtra	85	6	9	112	82	8	10	84
Orissa	63	38	0	8	88	12	0	26
Tamil Nadu	87	4	9	23	77	15	8	26
Uttar Pradesh	93	0	7	14	94	0	6	18
West Bengal	76	3	22	37	85	10	5	41
all-India	83	9	8	365	86	9	5	365

Each percentage is rounded off to the nearest integer and reported as such. The rounded figures may not add up to 100. This applies to all the statements giving percentage distribution of slums by any characteristic.

Chapter Two : Concepts, Definitions and Procedures

2.1 For collection of data on the condition of slums, certain concepts and definitions were used in the survey. These are explained below.

2.2 **Slum:** A slum is a compact settlement with a collection of poorly built tenements, mostly of temporary nature, crowded together usually with inadequate sanitary and drinking water facilities in unhygienic conditions in that compact area.¹ Such an area, for the purpose of this survey, was considered as a “**slum**” if at least 20 households lived in that area. Areas notified as slums by the respective municipalities, corporations, local bodies or development authorities were treated as “**notified slums**”. For this survey, only slums in urban areas were considered. If a slum lay partly within a sample urban block, the part of it within the sample block provided it contained at least 20 households was considered a slum for the purpose of the survey. This applied to both notified and non-notified slums.²

2.3 **House:** Every structure, tent, shelter, etc. was considered as a house irrespective of the nature of its use. It might be used for residential or non-residential purpose or both or even might be vacant.

2.4 **Household:** A group of persons normally living together and taking food from a common kitchen constituted a household. The members of a household might or might not be related by blood to one another.

2.4.1 Each inmate (including residential staff) of a hostel, mess, hotel, boarding and lodging house, residential institutions for disabled, etc. constituted a single member household. If, however, a group of persons among them normally pooled their income for spending, they together were treated as forming a household. For example, a family living in a hotel was treated as a separate household by itself.

¹ Slum dwellings are commonly known as ‘*jhopad patti*’ in Bombay and ‘*jhuggi jhopri*’ in Delhi.

² It may be noted that the definition of “slum” followed in the current survey conforms to the one adopted in the previous NSS survey.

2.4.2 In deciding the composition of a household, more emphasis was placed on 'normally living together' than on 'ordinarily taking food from a common kitchen'. In case the place of residence of a person was different from the place of boarding, he or she was treated as a member of the household with whom he or she resided.

2.4.3 A resident employee, or domestic servant, or a paying guest (but not just a tenant in the household) will be considered as a member of the household with whom he or she resides even though he or she is not a member of the same family.

2.4.4 When a person sleeps in one place (say, in a shop or in a room in another house because of space shortage) but usually takes food with his or her family, he or she should be treated not as a single member household but as a member of the household in which other members of his or her family stay.

2.4.5 If a member of a family (say, a son or a daughter of the head of the family) stays elsewhere (say, in hostel for studies or for any other reason), he/ she will not be considered as a member of his/ her parent's household. However, he/ she will be listed as a single member household if the hostel is listed.

2.5 Pucca structure: A pucca structure was one having walls and roofs made of "pucca materials".

2.5.1 Pucca and non-pucca materials: In the present survey, cement, concrete, oven burnt bricks, hollow cement/ash bricks, stone, stone blocks, jack boards (cement plastered reeds), iron, zinc or other metal sheets, timber, tiles, slate, corrugated iron, asbestos cement sheet, veneer, plywood, artificial wood of synthetic material and polyvinyl chloride (PVC) material constituted the list of pucca materials. All other materials were classified as "non-pucca materials". Non-pucca materials included unburnt bricks, bamboo, mud, grass, leaves, reeds, thatch, etc.

2.6 Katcha structure: A structure having both roof and walls made of non-pucca materials was called a katcha structure. Katcha structures could be of the following two types:

(a) **'Unserviceable katcha,'** which included all structures with thatch walls and thatch roof i.e. walls made of grass, leaves, reeds etc. and roof of a similar material, and

(b) **'Serviceable katcha,'** which included all katcha structures other than unserviceable katcha structures.

2.7 Semi-pucca structure: The term was used for a structure that had either the walls or the roof, but not both, made of pucca materials.

2.8 Type of latrine: Latrines serviced by scavengers were called "service latrines". A latrine connected to an underground sewerage system was called a "flush system latrine". A latrine connected to underground septic chambers was called a "septic tank latrine". A latrine connected to a pit dug in earth was called a "pit latrine". Information on type of latrine was recorded for the slum as a whole, which means that the type used most commonly by the slum dwellers, was recorded.

2.9 Underground Sewerage system: This means a system of underground pipes or conduits for carrying off drainage water, discharge from water closets, etc.

2.10 Drainage system: This means a system for carrying off waste water and liquid wastes of the area.

2.11 Garbage disposal: In the urban areas, some arrangements usually exist to carry away the refuse and waste of households to some dumping place away from the residential areas. In some places, the public bodies collect the garbage from the premises of the household or from some fixed points in the locality where the residents put their garbage. In some places, a body of residents themselves make the arrangement of carrying the garbage to the dumping place away from residential areas without participation of any public body till the final disposal. Information on the arrangement prevailing for the colony/ locality of the slum was obtained in the survey.

2.12 Distance of slum from nearest facility (government primary school, government hospital/ health centre): The distance from the centre of the slum to the nearest facility of the type in question (e.g. government primary school, government hospital/health centre) availed by/available to the slum dwellers was considered.

Chapter Three: Summary of Findings

3.1 As mentioned in Chapter One, this report presents estimates of some characteristics of slums such as number of slums, approximate number of households living in the slums, categorisation of slums by type of structure of the majority of the households, major source of drinking water, availability of electricity connection, type of road within and approaching the slum, latrine facility, underground sewerage system, drainage system, garbage disposal mechanism in vogue for the slum dwellers, etc. The slum profile on these characteristics is provided in respect of notified as well as non-notified slums. Correspondingly, the survey findings will also throw light on some aspects of social consumption amenities such as availability of schools and hospitals in the vicinity of slums. Further, the report discusses changes, if any, in the condition of the slum with reference to these characteristics over time.

3.1.1 The survey results are taken up first at the all-India level, separately for the notified and non-notified slum areas. Later, the discussion focusses on those 10 States where the number of sample slums was 10 or more, to examine whether the pattern as perceived for the country as a whole is reflected in the State data, and also to examine the variability across these States. The States are: Andhra Pradesh, Delhi, Gujarat, Karnataka, Madhya Pradesh, Maharashtra, Orissa, Tamil Nadu, Uttar Pradesh and West Bengal.

3.1.2 In the tables, the results have been presented for 'notified, 'non-notified' and 'notified and non-notified combined' (i.e., all) slums. The term 'slum' has been used in general to refer to both the notified and non-notified slums. For the ten selected States for which results have been presented, at least one sample slum was found to have been surveyed in both the categories, viz., notified and non-notified.

3.1.3 The estimates provided at the disaggregate level in this report may be used taking into consideration the number of surveyed slums on which the estimates are based. For example, while using the estimates for a particular State, or slum type, the corresponding number of slums surveyed may also be kept in mind.

3.2 Information was collected in respect of 730 slums selected as per the design of random sampling adopted, covering the entire country. Of these 730 sampled slums 365 (50%) were notified slums. The 10 States for which results have been presented accounted for 648 (89%) of the sample slums, as well as 318 (87%) of the sample notified slums.

3.3 **Number of slums:** Statement 3 presents percentage of notified and non-notified slums. From Statement 3 it is seen that during July 2008 to June 2009, about 49 thousand slums – according to the survey estimates – existed in the urban areas of India. Statement 3 further reveals that the estimated number of slums was highest in Maharashtra (35 per cent), followed by Andhra Pradesh (11 per cent) and West Bengal (10 per cent). In Andhra Pradesh, more than 75 per cent of the slums were notified. A similar survey on slums was conducted earlier in the 58th round of NSS during July to December, 2002. The total number of urban slums was then estimated as 51688 and about 51% of them were notified.

Statement 3: Percentage of notified and non-notified slums in different States and all-India

State	% notified	% non-notified	% share of slums in India	no. of sample slums
(1)	(2)	(3)	(4)	(8)
Andhra Pradesh	75.5	24.5	10.7	73
Delhi	33.8	66.2	6.4	53
Gujarat	40.0	60.0	6.9	57
Karnataka	49.7	50.3	4.6	45
Madhya Pradesh	34.3	65.7	4.5	31

all-India: 2002	50.6	49.4	100.0	692
2008-09 : estimated no. of slums				48994
2002¹: estimated no. of slums				51688
1993²: estimated no. of slums				56311

(Source: Appendix Table 3)

3.4 Ownership of land: Statement 4 presents the State-wise distribution of slums by type of ownership of land on which the slums were located. At the all-India level, about 37 per cent of the notified slums were on private land and 60 per cent on public land. The corresponding estimates for the non-notified slums were 42 per cent (private land) and 54 per cent (public land). Almost all the notified slums in Orissa and Karnataka were situated on public land while in Uttar Pradesh more than 70 per cent were on private land. As regards non-notified slums, in Gujarat (74%) and Orissa (71%) more than 70 per cent of them were on public owned land while in Uttar Pradesh more than 80 per cent were on private land.

3.4.1 A further look into the ownership pattern of public land occupied by the slums (Chart 1) reveals that about 48 per cent of the notified slums and 37 per cent of the non-notified slums were built on land belonging to local bodies like municipalities.

¹ Refer NSS Report No. 486: Condition of Urban Slums 2002, Government of India.

² Refer NSS Report No. 417: Slums in India, Government of India.

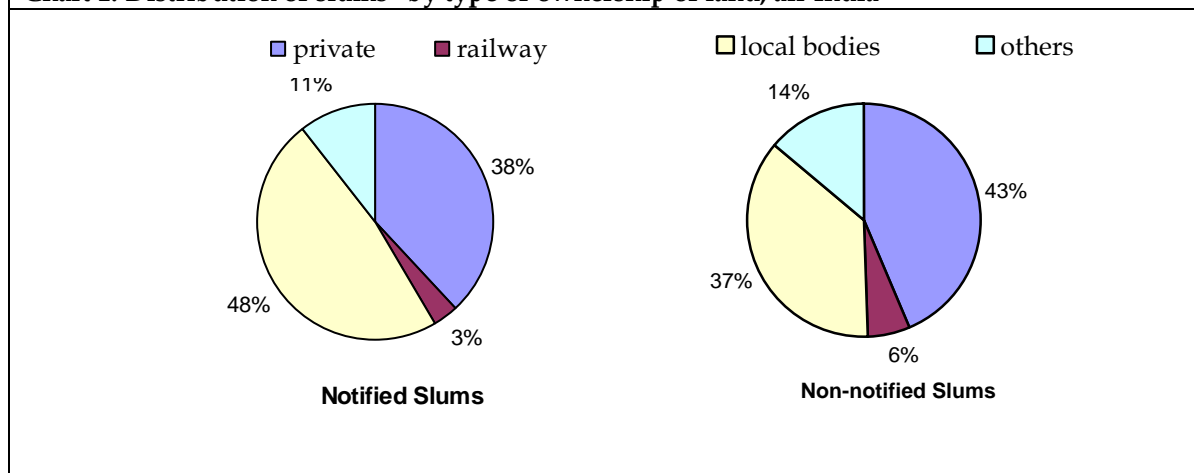

About 3 per cent of notified and 6 per cent of non-notified slums were built on land belonging to the Railways. Other public authorities like Defence, Airport, Highway Authorities or State governments accounted for the ownership of about 11 per cent of notified slums and 14 percent of non-notified slums.

Statement 4: Percentage distribution of slums in different States by type of ownership of land

State/UT	notified slum			non-notified slum		
	private	public	not known /n.r.	private	public	not known /n.r.
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Andhra Pradesh	41	59	0	53	46	1

(Source: Appendix Table 4)

Chart 1: Distribution of slums* by type of ownership of land; all-India

*excluding those for which information on ownership could not be obtained

3.4.2. Location of the slum: Statement 4a shows the percentage distribution of slums by location: along *nallahs*/ drains, along railway lines, on river banks, river beds, and other areas. An estimated 24% of all slums were located along *nallahs* and drains and 12% along railway lines. About 22% of slums were located on the fringe or border area of towns and 78% in other areas.

Statement 4a: Percentage distribution of slums by location of slums at all-India

location	notified	non-notified	all
(1)	(2)	(3)	(4)
along <i>nallah</i> / drain	22	26	24
along railway line	10	15	12

river bed	2	0	1
other	59	53	56
all	100	100	100

(Source: Appendix Table 21)

3.5 Structure of majority of houses: Information on the type of structure of the houses was not collected separately for each house in the selected slums but obtained in respect of the majority of the houses. The type of structure was classified into three categories, viz., '*pucca*', '*semi-pucca*' and '*katcha*'. It is seen from Statement 5b that there has been a noticeable change in respect of type of structure of houses in the slums during the period between 2002 and 2008-09. The percentage of slums where the majority of houses were *pucca*³ was 48 in 2002. This percentage is seen to have increased to 57 in 2009. Statement 5a shows that slums with the majority of the households living in *pucca* structures constituted about 64 per cent of notified slums and 50 per cent of non-notified slums in 2008-09. Wide variation across the states was, however, observed in this respect. In some states like Uttar Pradesh, Andhra Pradesh, Delhi, West Bengal and Maharashtra, 72 percent or more slums had the majority of their houses built with *pucca* materials. On the other hand, the majority of the houses in the slums of Orissa, Gujarat and Madhya Pradesh – both notified and

³ Pucca structures are those with both roof and walls made of pucca materials such as cement, concrete, oven-burnt bricks and other such building reinforcement materials. Katcha structures are those with both roof and walls made of katcha (non-pucca) materials, such as mud, thatch, bamboo, tents, etc. Semi-pucca structures are those with either roof or walls, but not both, made of pucca materials. (See also Chapter Two, paragraph 2.5 and sub-paragraph 2.5.1.)

non-notified – were of type semi-pucca or katcha. Inter-state variation in this respect was, however, less pronounced in case of non-notified slums.

Statement 5a: Percentage distribution of slums in different States by type of structure of majority of houses

State	notified slum			non-notified slum		
	pucca	semi-pucca	katcha	pucca	semi-pucca	katcha
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Andhra Pradesh	88	9	3	63	1	36
Delhi	77	14	9	49	23	28
Gujarat	14	66	20	29	38	33
Karnataka	26	63	12	67	21	11
Madhya Pradesh	19	54	28	35	21	45
Maharashtra	72	26	2	68	31	1
Orissa	0	99	1	0	37	63
Tamil Nadu	43	42	14	32	27	40
Uttar Pradesh	89	1	11	57	5	38
West Bengal	74	16	10	60	36	4

2008-09	57	29	14
2002	48	35	18

Chart 2: Percentage distribution of slums by type of structure of majority of houses, all-India

3.6 Major Source of Drinking Water: Slums surveyed in the 58th round (2002) as well as in the 65th round (2008-09) of NSS were classified according to major source of drinking water available to residents. The results of 2008-09 are shown in Chart 3 and Statement 6a. Comparison with 2002 at all-India level is made in Statements 6a and 6b. When notified and non-notified slums are considered together (Statement 6b), there is little change seen since 2002 in the distribution of slums by major source of drinking water: tap: 78%, tube-well: 16-17%, well and other sources: 5-7%. From Statement 6a it is seen that during 2008-09, although the proportion of slums using tube-wells as major source of drinking water has increased for notified slums as compared to 2002, it has declined during the same period for non-notified slums. In all the States except Orissa and Uttar Pradesh, more than two-thirds of slums - notified as well as non-notified - relied principally on tap water for drinking purposes. In Uttar Pradesh, less than a quarter of slums had tap water as principal source.

Statement 6a: Percentage distribution of slums in different States by major source of drinking water

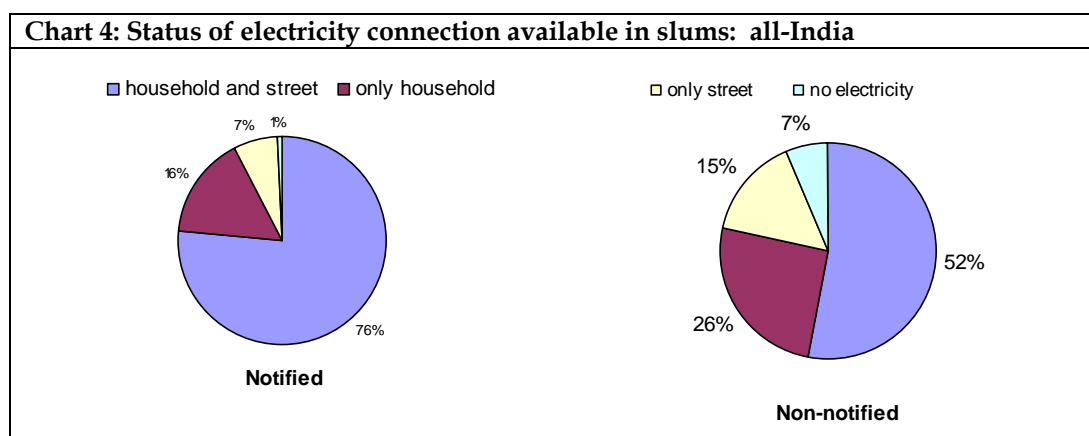

State	notified slum				non-notified slum			
	tap	tube-well	well	others	tap	tube-well	well	others
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Andhra Pradesh	80	12	1	9	68	32	0	0
Delhi	95	4	0	2	68	27	0	5
Gujarat	85	15	0	0	84	13	0	2
Karnataka	88	12	0	0	89	1	0	10
Madhya Pradesh	79	1	20	0	73	4	13	10
Maharashtra	94	5	1	0	90	6	0	3
Orissa	35	65	0	0	56	25	19	0
Tamil Nadu	67	21	2	10	81	11	4	4
Uttar Pradesh	22	79	0	0	24	76	0	0
West Bengal	77	17	3	4	82	12	3	4
all-India: 2008-09	79	17	1	3	77	17	2	3
all-India: 2002	84	10	2	4	71	22	2	5

(Source: Appendix Table 7)

Statement 6b: Percentage distribution of slums by major source of drinking water: all-India

year	all slums			
	tap	tube-well	well	others
(1)	(2)	(3)	(4)	(5)
2008-09	78	17	2	3
2002	78	16	3	4

3.7 Availability of Electricity: Electricity connection in the slums may be for household use, street lights or both. The distribution of slums in each of the 10 states by purposes for which electricity was available is given in Statement 7a, separately for notified and non-notified slums. The all-India scenario is shown in Chart 4 and comparison with 2002 made in Statement 7b. It was found that in 2008-09, electricity connection was not available in only 1 per cent of the notified slums and about 7 per cent of the non-notified slums. The overall proportion of slums without electricity came down from 8 per cent in 2002 to 4 per cent in 2008-2009. Among non-notified slums, the proportion was 34% for Uttar Pradesh, 17% for Andhra Pradesh, and 10-11% for Delhi and Gujarat. The proportion of notified slums at all-India level with electricity for both household purposes and street lighting is seen to have declined from 84% to 76%, the States worst-off in this respect in 2008-09 being Gujarat (15%) and Orissa (32%). Compared to 2002, the percentage of non-notified slums with street light facility only has increased from 6 to 15 percent in 2007-08.

Statement 7a: Percentage distribution of slums by type of availability of electricity connection: selected States and all-India

State	notified slums				non-notified slums			
	house-holds and street	house-holds only	street light only	no electricity	house-holds and street	house-holds only	street light only	no electricity
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Andhra Pradesh	94	3	4	0	74	0	10	17
Delhi	94	6	0	0	49	37	4	11
Gujarat	15	70	15	0	57	19	14	10
Karnataka	89	0	12	0	52	18	30	0
Madhya Pradesh	73	27	0	0	39	54	8	0
Maharashtra	78	19	3	0	56	29	15	0
Orissa	32	66	1	1	69	20	3	8
Tamil Nadu	92	0	8	0	71	21	8	0
Uttar Pradesh	73	1	11	15	17	25	24	34
West Bengal	73	11	16	0	58	13	24	5
all-India: 2008-09	76	16	7	1	53	26	15	7
all-India: 2002	84	11	4	1	53	25	6	16

(Source: Appendix Table 8)

Statement 7b: Percentage distribution of slums by type of availability of electricity connection: all-India

year	all slums			
	house-hold and street	house-holds only	street light only	no electricity
(1)	(2)	(3)	(4)	(5)
2008-09	65	21	11	4
2002	69	18	5	8

3.8 Roads Within Slums and Approach Road to Slums: Statement 8 shows the percentages of slums where the road within the slum used by the dwellers as main thoroughfare was *pucca*, and the percentage for which the main road leading to the slum area was of the (a) motorable *pucca* (b) non-motorable *pucca* kind. A marked improvement in the quality of the main road within the slum is seen since 2002, with about 78% of the notified slums (71% in 2002) and 57 per cent of the non-notified slums (37% in 2002) reporting that the main road within the slum was *pucca*. The proportion of slums with a *pucca* approach road was 92% (86% in 2002) for notified slums and 76% (67% in 2002) for non-notified slums. Orissa and Gujarat had the lowest proportions of notified slums with a *pucca* main road within the slum. In

respect of non-notified slums, *pucca* roads (both within-slum and approach road) were least frequently found in Uttar Pradesh.

Statement 8: Percentages of slums in different States having pucca roads within the slum and having pucca approach roads to the slum

State	pucca road within slum		pucca approach road to slum			
	notified	non-notified	notified		non-notified	
			motorable	non-motorable	motorable	non-motorable

all-India: 2002	71	37	73	13	55	12

(Source: Appendix Tables 9 and 10)

3.9 Waterlogging During Monsoon: It was ascertained in the 2008-09 survey, as in 2002, whether the slum and whether the approach road to the slum, was usually waterlogged during the monsoon. In either case, the slum was classified as affected by waterlogging during the monsoon. The percentage of such slums among notified and non-notified slums is given in Statement 9. At the all-India level, the proportion of slums affected by waterlogging has increased from 36% in 2002 to 41% in 2008-09 in the notified slums but remained stable (54%) in the notified slums. Taking all slums together, about 48% were usually affected by waterlogging during monsoon – 32% with inside of slum waterlogged as well as approach road to the slum, 7% where the slum was waterlogged but not the approach road, and 9% where only the approach road was waterlogged in the monsoon. In Orissa, 99% of the notified slums were affected by waterlogging.

Statement 9: Percentage of slums in different States affected by waterlogging during monsoon

State	notified slum		non-notified slum	
	water-logged	not water-logged	water-logged	not water-logged
(1)	(2)	(3)	(4)	(5)

all-India: 2002	36	63	54	46

(Source: Appendix Table 19)

3.10 Availability of Latrine Facility: The sanitary conditions in the slums in terms of latrine facility during 2008-09 appear to have improved considerably since 2002. At all-India level, the proportion of slums not having any latrine facility declined sharply from 17% in 2002 to 10% in 2008-09 for notified slums and from 51% to 20% for non-notified slums (Statement 10). The state-level results for 2008-09 are also given in Statement 10. During 2008-09 the proportions of notified and non-notified slums with no latrine were very high in Orissa (49% and 36% respectively), Gujarat (39% and 48% respectively) and Tamil Nadu (27% and 40% respectively).

Statement 10: Percentage of slums in different States having septic tank/ flush latrine and percentage of slums not having any latrine

State	no latrine		septic tank/ flush latrine

3.11 Sewerage System and Drainage Facility: The status of slums with reference to underground sewerage and different types of drainage facility available is presented in Statement 11 and the all-India status with reference to drainage facility is shown in Chart 5. Columns (2) and (3) give the percentage of slums with underground sewerage. Columns (4) to (9) give percentages of slums with different types of drainage. In 2008-09, 33% (30% in 2002) of notified slums and 19% (10% in 2002) of non-notified slums had underground sewerage. The proportion of slums having underground drainage or covered drainage system constructed with *pucca* materials increased from 25% to 39% in notified slums – the share of slums with open drainage declining from 61% to 50% and of those without any drainage from 15% to 10% – between 2002 and 2008-09. Among non-notified slums, the share of slums with underground or covered drainage system and those with open drainage both increased by about 10 percentage points, while the share of those with no drainage declined from 44% to 23%. During 2008-09 the proportion of notified slums with no drainage was highest in Gujarat (62%) and Orissa (49%), while for non-notified slums the highest proportions of slums without drainage were found in Uttar Pradesh (54%), Orissa (49%) and Gujarat (40%). Further, the proportion of slums

having underground drainage or drainage system built with *pucca* materials was very high in Delhi (89%) and Maharashtra (61%) among the notified slums and in Maharashtra (53%) among the non-notified slums.

Statement 11: Percentage of slums in different States having underground sewerage and percentages of slums with different types of drainage

Chart 5: Status of types of drainage facility available to slums:all India

3.12 Arrangement for Garbage Disposal: Another dimension of civic sanitation in slums that needs to be looked into is the arrangement for garbage disposal.

Statement 12a gives the percentage distribution of slums by type of agency disposing of the garbage, separately for the notified and non-notified slums. Statement 12b shows the percentage of slums, among slums having garbage disposal arrangement, where garbage was reported to be collected at least once in 7 days. Statement 12c shows the change in these percentages between 2002 and 2008-09, considering notified and non-notified slums together.

3.12.1 Compared to 31% of urban slums of India in 2002 (Statement 12c), only about 16% of the slums had no system of garbage disposal in 2008-09. Such slums constituted 10% of the notified slums and 23% of the non-notified slums in 2008-09 (Statement 12a). Government agencies were engaged in collection of garbage in 75% of notified slums and 55% of non-notified slums in 2008-09.

3.12.2 Among the slums where the system of garbage disposal was run by the government, about 92-93 per cent reported that collection of garbage took place at least once in 7 days. The percentage was much lower for slums where other agencies ran the system – only 34% considering notified and non-notified slums together.

Statement 12a: Percentage distribution of slums in different States by type of agency disposing of garbage

3.13 Availability of Government Primary School and Government Hospital: In respect of availability of educational and health facilities it is seen from Statement 13b that about 87% of the slums had at least one Government primary school located within 1 km. In the 58th round survey (2002), when data was collected on the availability of any primary school, and not restricted to government primary school,

it was observed that about 90% of slums had at least one primary school located within 1 km. Government hospitals were available within 1 km of 42% of non-notified slums and 54% of notified slums. Statewise results are given in Statements 13a and 13b. It is seen from Statement 13a that the percentage of notified slums not

all-India: 2002	48	52	46	54	47	53

(Source: Appendix Table 17)

having a Government primary school within 1 km was highest in Orissa (51%), followed by Madhya Pradesh (37%) and Uttar Pradesh (30%). In West Bengal, all the notified slums surveyed and an estimated 89% of the non-notified slums had such a school within 1 km. Statement 13b shows that percentage of notified slums having a Government hospital within 1 km was lowest in Madhya Pradesh (15%) and Orissa (33%).

3.14 Improvement of Facilities: For a number of facilities, including those discussed in the foregoing paragraphs, it was ascertained from the informants whether the facility had undergone any improvement or deterioration during the last five years. The facilities were: approach road, road within slum, water supply, street lights, electricity, latrine facility, sewerage, drainage, garbage disposal, educational facilities at primary level and medical facilities. The percentages of slums for which improvement was reported is given facility-wise and Statewise in Statement 14. The estimates are given separately for the notified and non-notified slums. Such information was also collected in 2002 (NSS 58th round), except for improvement in educational facilities at primary level and medical facilities. As expected, improvements were more perceptible in the notified slums than in the non-notified ones. Among the States, Gujarat, Orissa and Madhya Pradesh showed relatively little improvement in slum facilities since 2002. In Gujarat, improvements were rare in case of slum roads (especially in non-notified slums) and slum approach roads, electricity (especially notified slums), drainage, sewerage, educational and medical facilities. In Orissa, approach roads, latrine, drainage, sewerage and medical facilities showed the least improvement, and in Madhya Pradesh, it was latrines, sewerage and garbage disposal that showed the least tendency to improve.

3.14.1 Statement 15 shows the proportion of slums by direction of change in condition of different facilities, (i.e., improvement/ deterioration/ no change/ non-existence in past and at time of survey) during last 5 years. This is presented separately for each facility at all-India level.

3.15 Source of Improvement of Facilities: Informants reporting improvement in any facility during the last 5 years were also asked about the source of the improvement: whether it had been brought about by the government, by NGOs, by the residents, or by others. The results, shown in Statement 16, indicate that the Government has played a vital role in the development of facilities in both notified and non-notified slums. The contribution of NGOs is particularly noticeable in providing educational facilities at primary level in the notified slums. In non-notified slums, the role of NGOs was relatively significant in improving the facilities of latrine, sewerage and drainage. However, residents themselves also played an important role in improving latrine facility in both notified and non-notified slums.

Statement 16: Percentage distribution of slums reporting improvement of facilities during last 5 years by type of authority responsible for improvement; all-India

facility	notified slum				non-notified slum			
	govern- ment	NGO	residents	others	govern- ment	NGO	residents	others

(Source: Appendix Tables 34 to 44)

3.16 Deterioration of Facilities: Complementary to the information on improvement in facilities, Statement 17 summarises state-specific status of slums reporting deterioration in the availability of specific facilities during the last five years, separately for the notified and non-notified slums. For all the facilities, the all-India percentage of slums reporting deterioration varied between 0 and 6 per cent for the notified slums and between 0 and 9 per cent for the non-notified slums. The facilities that underwent deterioration vary a great deal from State to State and also between the notified and non-notified categories within a State. Such facilities include, for example, approach and within-slum roads for non-notified slums of Orissa and Andhra Pradesh, and electricity, latrine, sewerage and garbage disposal for notified slums of Gujarat. Several of the facilities deteriorated markedly in the notified slums of Uttar Pradesh. The incidence of deterioration was least in case of educational and medical facilities.

Appendix A

Notes:

- i) *The results at the State/UT level have been given only for those States/UTs for which the number of sample slums was ten or more. The all-India level estimates are, however, based on all the surveyed slums.*
- ii) *In the statements and tables presented in this report, '-' has been used if the survey could not net any slum in that particular level of disaggregation. On the other hand, the figure '0' has appeared in some levels of disaggregation where the estimated figure is very low and has become '0' because the figures are rounded off.*
- iii) *The marginal totals and proportions presented in various tables may, in some cases, vary slightly due to the rounding off of figures.*

Appendix B

Sample Design and Estimation Procedure

1. **Geographical coverage:** The survey covered all urban areas of the Indian Union.
2. **Period of survey and work programme:** The period of survey was of one year duration starting on 1st July 2008 and ending on 30th June 2009. The survey period of this round was divided into four sub-rounds of three months' duration each as follows:

sub-round 1 : July - September 2008
sub-round 2 : October - December 2008
sub-round 3 : January - March 2009
sub-round 4 : April - June 2009

2.1 In each of these four sub-rounds equal numbers of sample villages/ blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempts were made to survey each of the FSUs during the sub-round to which it was allotted. Because of the arduous field conditions, this restriction is not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, participated and rural areas of Arunachal Pradesh and Nagaland.

3. **Schedules of enquiry:** During this round, the following schedules of enquiry were canvassed:

Schedule 0.0 : list of households
Schedule 21.1 : domestic tourism
Schedule 1.2 : housing condition
Schedule 0.21 : particulars of slum

4. **Participation of States:** All the States and Union Territories of India, except for Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep, participated in the survey by surveying an independently drawn sample of urban blocks (and villages for the surveys of housing condition and domestic tourism). This report is based on the Central sample, that is, the blocks surveyed by NSSO officials, in all States and UTs except Leh and Kargil districts of Jammu & Kashmir, where no Central sample was surveyed and the State sample

data were used in preparing the State and all-India estimates for the report. The ratio of the State/UT sample size (number of FSUs planned to be surveyed by State survey officials) to the size of the Central sample (number of FSUs allotted for survey by NSSO officials) for the participating State/UTs was as follows:

Nagaland (U)	: triple
J & K , Manipur & Delhi	: double
Maharashtra (U)	: one and half
Gujarat	: less than equal
Remaining States/ UTs	: equal

5. Sample Design

5.1 Outline of sample design: A stratified multi-stage design was adopted for the 65th round survey. The first stage units (FSUs) in the urban sector were Urban Frame Survey (UFS) blocks. For towns with no UFS frame available (applicable to Leh and Kargil towns of J&K), each town was treated as an FSU. For the survey of slums, there was, unlike the other surveys of the 65th round, no second stage of sampling involving selection of households. Nevertheless, the paragraphs that follow will refer to the sampling units for the slum survey (towns in case of of Leh and Kargil, and UFS blocks elsewhere) as FSUs.

5.2 Sampling Frame for First Stage Units: *For the urban sector*, the list of latest available Urban Frame Survey (UFS) blocks was considered as the sampling frame. However, for Leh and Kargil towns of J&K, UFS frame was not available. Accordingly, Census 2001 served as the frame for these two towns (referred henceforth to as non-UFS towns).

5.3 Stratification in Urban sector: In the urban sector, strata were formed within each NSS region on the basis of size class of towns as per Census 2001 town population. The stratum numbers and their composition (within each NSS region) are given below.

Stratum	Composition (within NSS region)
1	All towns with population < 50,000
2	All towns with population 50,000 - 99,999
3	All towns with population 1,00,000 - 4,99,999
4	All towns with population 5,00,000 - 9,99,999
5, 6,	Each million-plus city

The non-UFS towns of Leh and Kargil of J & K within the NSS region (region number '014') were grouped together to form a separate urban stratum.

5.4 Sub-stratification: There was no sub-stratification in the stratum consisting of non-UFS towns. However, to net an adequate number of slums, each of the other strata were divided into 2 sub-strata as follows:

- sub-stratum 1: all UFS blocks having area type 'slum area'
- sub-stratum 2: remaining UFS blocks

5.5 Total sample size (FSUs): A total number of 4738 UFS blocks formed the Central sample.

5.6 Allocation of total sample to States and UTs: The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to a minimum sample allocation to each State/ UT. While making this allocation, the resource availability in terms of number of field investigators was also taken into consideration.

5.7 Allocation of State/ UT level sample to rural and urban sectors: The State/ UT level sample was allocated between rural and urban sectors in proportion to population as per *Census 2001* with 1.5 weightage to urban sector, subject to the restriction that the urban sample size for bigger states like Maharashtra, Tamil Nadu, etc. should not exceed the rural sample size. At least 4 FSUs were allocated to each state/ UT separately for rural and urban areas. Further, the State level allocations- both rural and urban- were adjusted marginally in a few cases to ensure that each stratum got a minimum allocation of 4 FSUs.

5.8 Allocation to strata/ sub-strata: Within each sector of a State/ UT, the sample size was allocated to the different strata in proportion to the stratum populations as per Census 2001. Allocations at stratum level were adjusted to multiples of 4 with a minimum sample size of 4. Stratum-level sample size in the urban sector for strata belonging to UFS towns was further allocated to the 2 sub-strata in proportion to the number of UFS blocks in them with double weightage to sub-stratum 1, subject to a minimum allocation of 4 to each of the two sub-strata.

5.9 Selection of FSUs: Within each urban sub-stratum (formed from UFS towns), the UFS blocks were arranged in ascending order of population of the towns to which they belonged, and sample FSUs selected by circular systematic sampling with equal probability. Within each sub-stratum, the number of sample FSUs was a multiple of 4. Sample FSUs were selected in the form of two independent sub-samples and an equal number of sample FSUs was allocated to the four sub- rounds.

5.9.1 Since UFS frames were not available for Leh and Kargil towns of Jammu and Kashmir, each of these two towns was treated as an FSU. Both these towns were selected and repeated in each of the sub-rounds 1 to 4 of the sample list.

5.10 Survey on urban slums: Information on each slum, notified or non-notified, found in the entire selected FSU was collected through Schedule 0.21. In case the slum was spread over more than one FSU, only the part within the selected FSU was surveyed (provided it had at least 20 households) and considered as 'one slum'.

6. Estimation Procedure

6.1 Notations

s = subscript for stratum

t = subscript for sub-stratum (only for UFS towns)

m = subscript for sub-sample (m =1, 2)

i = subscript for FSU (block/ non-UFS town)

N = total number of FSUs in any urban sub-stratum

n = number of sample FSUs surveyed including zero cases but excluding casualty for a particular sub-sample and stratum/sub-stratum.

x, y = observed value of characteristics x, y under estimation

\hat{X}, \hat{Y} = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

y_{stmi} = observed value of the characteristic y of the i^{th} FSU belonging to the m^{th} sub-sample for the t^{th} sub-stratum of the s^{th} stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

6.2 Formulae for estimation of aggregates for a particular sub-sample and stratum (non-UFS towns of urban i.e. Leh and Kargil)/ sub-stratum (for UFS towns):

(i) For estimating the aggregate value of a characteristic (no. of slums with a given feature) for the t^{th} sub-strata of the s^{th} stratum on the basis of the m^{th} sub-sample:

$$\hat{Y}_{sm} = \sum_{t=1}^2 \hat{Y}_{stm}$$

where $\hat{Y}_{stm} = \frac{N_{st}}{n_{stm}} \sum_{i=1}^n Y_{stmi}$ and Y_{stmi} is the total of observed values for the characteristic y for the i -th FSU.

Note: There are only two FSUs (Leh and Kargil towns) in NSS region '014' of J & K. Both of these have been selected and repeated in each of the sub-rounds and they belong to sub-stratum 2. In this case, $N = 2$ in the above formula and n is the number of FSUs actually surveyed including repetitions ($n = 8$ for the whole round and $n = 4$ for a sub-sample of the whole round assuming no casualty).

6.3 Overall estimate for aggregates:

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

6.4 Overall estimate of aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

6.5 Estimates of Ratios:

Let \hat{Y} and \hat{X} be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}.$$

6.7 Estimates of Error: The estimated variances of the above estimates are as follows:

6.7.1 For aggregate \hat{Y} :

$$\hat{V}ar(\hat{Y}) = \sum_s \hat{V}ar(\hat{Y}_s) \quad \text{where } \hat{V}ar(\hat{Y}_s) \text{ is given by}$$

$$\hat{V}ar(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2, \text{ where } \hat{Y}_{st1} \text{ and } \hat{Y}_{st2} \text{ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.$$

6.7.2 For ratio \hat{R} :

$$\hat{M}SE(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[(\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

where $\hat{Y}_{s1}, \hat{Y}_{s2}$ and $\hat{Y}_{st1}, \hat{Y}_{st2}$ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

6.7.3 Estimates of RSE:

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{\hat{V}ar(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{\hat{M}SE(\hat{R})}}{\hat{R}} \times 100$$

7. Multipliers:

The formula for multipliers at stratum/sub-stratum level for a sub-sample is given below:

$$M(s,t,m) = \frac{N_{st}}{n_{stm}}$$

Note: (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable may be used.

(ii) Multipliers have to be computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.
